ISOLED
CUSTOMISED LIGHT SOLUTIONS

ISOLED®
EUROPEAN BRAND SINCE 2008

Our company consists of professional visionaries and motivated doers, who continuously drive forward the technical developments in LED technology and set new accents and trends with their innovative ideas and solutions.

Since 2008 we have been offering our customers and partners a standardised LED product range with more than 2.830 items, intelligent LED project lighting solutions as well as customer-specific manufacture of sustainable LED lighting solutions according to specific requirements.

When creating our wide range of products and services, we base our actions both on

» Requirements of our customers as well as on the

» technical progress within LED technology.

Excellent quality, highly competent advice from our staff , as well as sustainable growth of our company make sure our partners can reliably cover their needs with the latest LED lighting components and systems.

Dear ladies and gentlemen, dear customers and interested parties !

At the time of publication of our product catalog 2023 (with about 2830 products and 419 new listings), our general life has become more uncertain and burdensome. Many new factors are influencing the economy, the stability of Europe and our everyday life. Massively rising raw material and energy prices, significantly extended times in the supply chain, fears created by the Russia-Ukraine war and the associated inflation on an unimagined scale, as well as interest rate increases present us with enormous challenges that must be overcome.

We must also not ignore the corona pandemic, as the end is not yet in sight, and the effects are also being felt in the personal and economic spheres.

Only through an optimistic and combative attitude, we can maintain our economic performance, our basic social order and our social systems.

"Always stay positive and optimistic, always keep fighting and never give up!"

„Immer positiv und optimistisch bleiben, immer weiter kämpfen und niemals aufgeben!“

Sarkis Otyan (1939 – 2022)

Our focus and efforts are to continue to maintain our services at the highest level and to constantly improve. We achieve this with market-driven adjustments and the most intensive efforts to ensure that these factors do not influence the business relationship.

We have learned to keep our company "FIT". Despite difficult conditions, we were able to continue our growth of over 20% from 2019 to 2020 in 2021 due to ongoing optimisation.

Top motivated employees, an adaptable organisation, as well as a sustainable development of our digitisation strategy, essentially form the basis of our performance.

We are a "fit" company with a powerful organisation and top motivated employees!

In this way, we ensure:

» best service and qualified expert advice

» continued maximum availability

» Top quality

» a sustainable range

» long-term and stable partnerships

We received outstanding feedback through the 2022 customer survey. A recommendation rate of over 99% (with approximately 2,000 qualified customer responses) speaks volumes.

We continue to monitor ongoing developments with prudence and care so that we can continue to shape our work actively and in line with the market.

Flexibility and agility are constant companions in our everyday work.

Many thanks to our employees! Who have helped to shape everything, who have supported everything and who have given their best. We cannot appreciate enough the dedication, trust and loyalty of each individual.

Many thanks to our customers and partners! Who, despite the uncertainty, have pushed and further expanded the cooperation and remain loyal to us. Your trust in our service, our competencies, the ability to deliver, the products and services contribute significantly to our success.

Our plans for the future remain ambitious and growth-oriented. Based on our core values of sustainability, loyalty and trust, we will take further steps to invest in the intensive expansion of market development in the DACH region, expand our sales throughout Europe and further develop our order-oriented manufacturing.

In addition, we will deepen our industry and target group approach!

We continue to grow! We continue to grow! In the first half of 2022 we were able to continue our growth course (again a + of approx. 17 %), therefore we are strengthening our existing team of over 170 employees in all areas - with a focus on sales and customer service.

Above all, we wish you, your employees and families health, happiness and a good business year together.

Ing. Hacadur Otyan
CEO | Chairman of the board (founder)

Mag. Stefan Wurnig
CTO | Management Technology (founder)

ISOLED®- TECHNOLOGY

ALWAYS THE PULSE OF PROGRESS

A rapidly changing world, rapid technical advances and increasing demands from our customers and the market challenge us every day. This dynamic is our driving force in the development of optimized and innovative new LED components, products and lighting systems.
In close cooperation between our product management and production research and development teams, we develop trend-setting and solution-oriented lighting concepts - always with a focus on maximum economic and ecological energy efficiency.

LED CHIPS AND COMPONENTS OF THE HIGHEST QUALITY CLASSES

LED branded products from ISOLED® consist exclusively of high-quality components. In addition, only tested LED chips and standardised components (excellent quality) are used. Our LED products must meet the prescribed performance values in accordance with the strictest quality and test criteria without any complaints in order to be finally released for sale.

ISOLED® DATASHEETS

The real performance data measured under real conditions are published for each item in a datasheet. Every customer has direct online download access.

TEST METHOD ON HIGHEST LEVEL

CONSTANT LIGHT QUALITY THROUGH BINNING

Binning at ISOLED® is an essential part of product management and quality assurance and is operated, monitored and checked with the greatest care.

» Compared to the usual market procedure, we define the exact x and y coordinates for our products on the CIE diagram (standard valence system) and thus reduce the commercially available bin sizes more than significantly (exact details are available on request). This ensures high and stable light quality (brightness, light color, etc.).

» Assuming the appropriate stock quantity and availability, each order at ISOLED® is served exclusively from a batch ID. This allows us to achieve uniform binning with the excellent value of 1 SWE (no visible color difference).

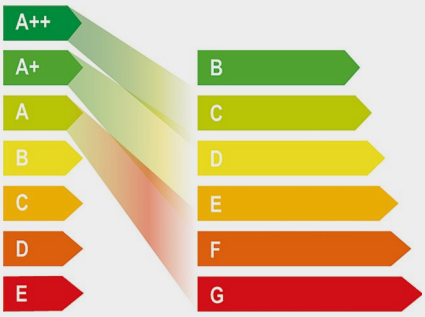
» For production and economic reasons, subsequent batches are in the range of 2 - 3 SWE (barely visible color difference) compared to previous batches.

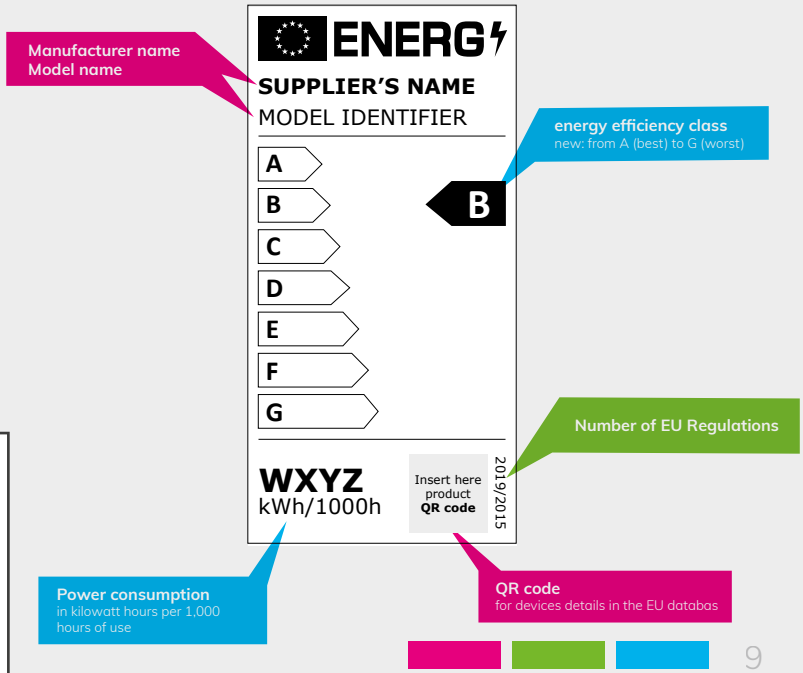
DIMENSION OF THE MACADAMELLIPSIS	1 SWE	2-3 SWE	> 4 SWE
Quality of the color homogeneity	*No perceptible color difference	*Barely perceptible color difference	*Visible color difference

*color difference visible to the human eye that is not or barely perceptible

Good to know!

The new energy efficiency classes are now determined according to a modified calculation method. In particular, the **luminous flux** (lumen) obtained from the **power** (watt) is decisive for this. It is not possible to use the old energy efficiency classes 1:1 in the new classification system. The EU Ecodesign Directive provides for the **new** labelling requirement for all light sources from September 2021. The new classes can therefore already be found in our catalog.





The new energy efficiency classes

The new energy label divides light sources into **7 classes** : from **A** for "very efficient" to **G** "less efficient". The new scale makes it easier for consumers to compare products when the focus is on high luminous efficacy.

ISOLED
CUSTOMISED LIGHT SOLUTIONS

GUARANTEED QUALITY

TROUBLE-FREE OPERATIONAL SAFETY

Your quality requirements are our touchstone

We are committed to our customers and partners that luminaires, lighting components and systems, illuminants, control technology and all services based on the latest LED technology always meet the highest quality requirements. To ensure our high quality standards we offer:

» Modern ISOLED® lighting laboratory

» Batch-managed material flow

»Quality management & warranty services

» Internal & external quality audits

» Customer-oriented return management

» CE certification

CE

Certified and tested

The complete LED ISOLED® product range is CE-marked and therefore complies with the requirements for product conformity according to the latest EU guidelines.

A tested and certified CE product coordinator from ISOLED® takes on the implementation of all ongoing internal standards and cross-checks of the EU regulations. Supplier audits ensure compliance with the CE requirements by the manufacturer.

FROM AUTUMN:
Benefit from our new **e-learning platform!** With ReTeach we offer you an innovative training and further education concept that will convince you.

Absolute data transparency WITH REAL PERFORMANCE DATA

We achieve the satisfaction of our customers and partners through data transparency. We test and measure all photometric parameters as part of a regulated multi-stage quality assurance process and list these, along with numerous other details, in our product data sheets. Our stated performance data are not simply the result of theoretical calculations, but correspond to the photometric values of the final overall product actually measured in our in-house lighting laboratory (i.e. including reflectors, optics, housing - measured under real ambient conditions, etc.).

On request, we can of course also provide specific reports from our photometric test laboratory.

Central QM assessment system

Our quality planning defines all quality characteristics and

mandatory test procedures, which are utilised in the areas of product development/design, purchasing, material management, production, sales, logistics and process management to ensure consistently high quality standards.

Cross-departmental internal and external audits verify and

re- cord the implementation quality of control measures.

The results of the test records flow into a central assessment

system, and form both the basis for the assessment as well as a means for medium/long-term strategic and short-term

operational measures.

Mandatory testing procedures in the QC test laboratory at ISOLED® are applied for

- the regular measurement, verification and validation of all photometric data;
- the ongoing, mandatory batch sampling;
- the function / fault analysis and rectification in the event of complaints and returns;
- the testing of prototypes from research and development;
- the sustainable assurance of all quality standards by ISOLED®, the EU directive as well as other national and international standards and guidelines.

QM SYSTEMS ACCORDING TO ISO 9001

SUSTAINABLE SPARE PARTS AND PRODUCT SUPPLY

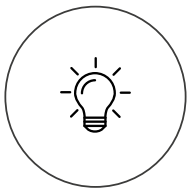
In addition to the ISOLED® warranty services, we guarantee smooth and sustainable spares supply as well as long-term product availability. Due to rapid LED technology development, it is to be expected that products improve dramatically and change in some cases. The compatibility between, for example, newly developed LED light sources and existing LED lights must be ensured by the manufacturer in the long term.

ADVANTAGE THROUGH KNOWLEDGE

Improving consultancy skills

We combine many years of experience in technical applications with LED know-how and pass both on to our employees.

With a deep understanding of the economic and environmental efficiency of LED light solutions, as well as enthusiasm for this sustainable and environmentally friendly type of lighting, they support our customers and partners through each LED project.



Specific customer training

It is very important to us that you and your staff are involved in the topics

- ISOLED® Product knowledge,
- ISOLED® application technology,
- LED basic knowledge and
- LED sales

for basic training and further development.

CUSTOMISED ASSEMBLY

DELIVERY READY TO CONNECT

LED LUMINAIRE CONSTRUCTION

You need a luminaire as a special one-off for an office or would like to order an LED lighting element in series production? Whether a small or large project - let us advise you. **Wesupportyou with our expertise and build LED lights according to your specifications and wishes.**

Customized LED Lighting - Customized Assembly of LED flex stripes and aluminum profiles

Each project is unique. For this reason, ISOLED® assembles LED flex bands as well as aluminum profiles exactly according to your wishes and specifications. Regardless of whether you only need a single piece or want to commission a serial high-volume production **We will help you to implement your project.**

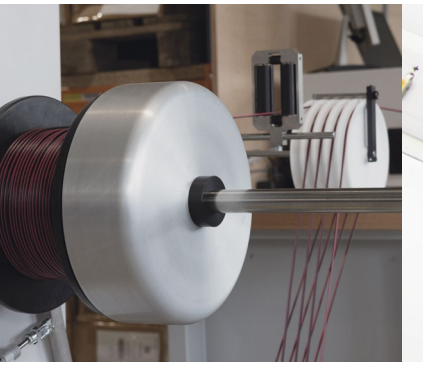
- **Custom cutting LED flex stripes**
- **Custom cutting LED cooling stripes**
- **Soldering and connecting the LED flex stripes with connectors**
- **Custom cutting profiles for LED flex stripes**
- **Bonding of LED flex stripes in profiles**
- **Attachment of infeeds, closure caps and cabling**

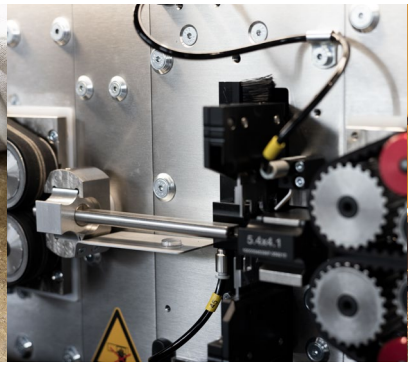
Final function checks of the LED are of course standard at ISOLED®!

INDIVIDUAL ASSEMBLY OF LED FLEX STRIPES:

We assemble all LED flex stripes. LED flex stripes

» cut to measure according to the given parameters
» professionally soldered with connecting/connecting cables,
» or with clip connectors up to IP67 and reliably insulated.





Insulation material

The soldering points are professionally insulated with shrink tubing to protect them.

Connecting cable / connection cables

We manufacture connection cables of any length and can also use connection plugs of your choice.

PROFESSIONAL SOLDERING

SOLDERING AND CONNECTING WITH CONNECTION CABLES

Flex stripes are cut according to the desired dimensions at the point of separation, precisely soldered to the selected / required connection cables and professionally insulated and secured.

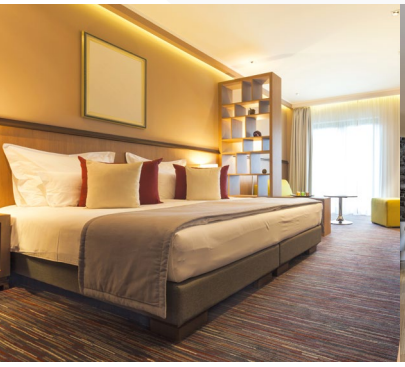
The final restoration of the tightness of the LED flex stripe is mandatory and is, of course, performed competently and reliably.

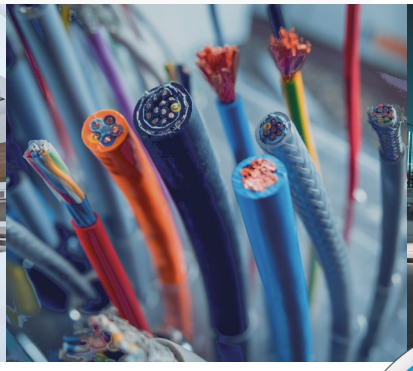
NO SOLDERING IS TOO COMPLEX:
We solder and wire 2, 3, 4, 5 and 6 poles for you
With this we save you valuable working time!

NEW

AQUA FLEX STRIPES

We assemble AQUA flexible stripes for outdoor use and provide them with weather-resistant connection cables of any length with protection class IP67.

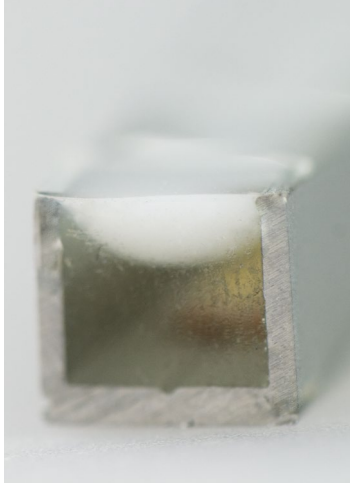


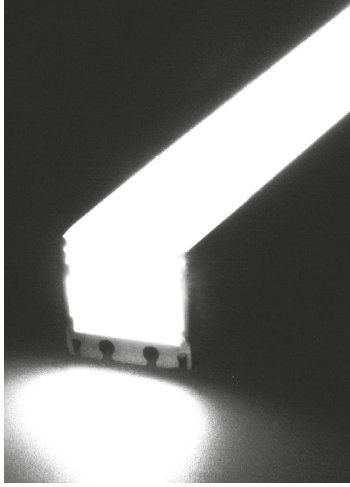


CUSTOMIZED FOR YOU IN ONLY 5 WORKING DAYS!

FOR STOCK ITEMS AND STANDARD QUANTITIES

Tailor-made items are excluded from return.





ASSEMBLY

OF LED ALUMINUM PROFILES

Our LED profiles and covers have a standard length of 2m (up to 5.5m depending on the item).

Our assembly service for LED aluminum profiles, covers and aluminum cooling strips includes:

» the precise cutting according to the specified dimensions (also miter cuts from 45° to 135°),

» the deburring of the cut surfaces,

» drilling the profiles according to specifications,

» clicking together the aluminum profiles and the covers,

» the nesting of the profile with the cable lock (in case of compatibility),

» attaching the end caps,

» as well as threading in the wire suspension.

PREMIUM PURE FULL ENCAPSULATION

CUSTOM-MADE LED LIGHT STRIPES WITH IP67 PROTECTION

On request, we can assemble any aluminum profile with LED flex stripe and cabling (up to an aluminum profile length of 5.5m) in a multi-stage waterproof potting process. This means that linear light lines can be used safely waterproof in damp rooms, wet cells or outdoors. Advantages are:

Sealing: Protection class IP67

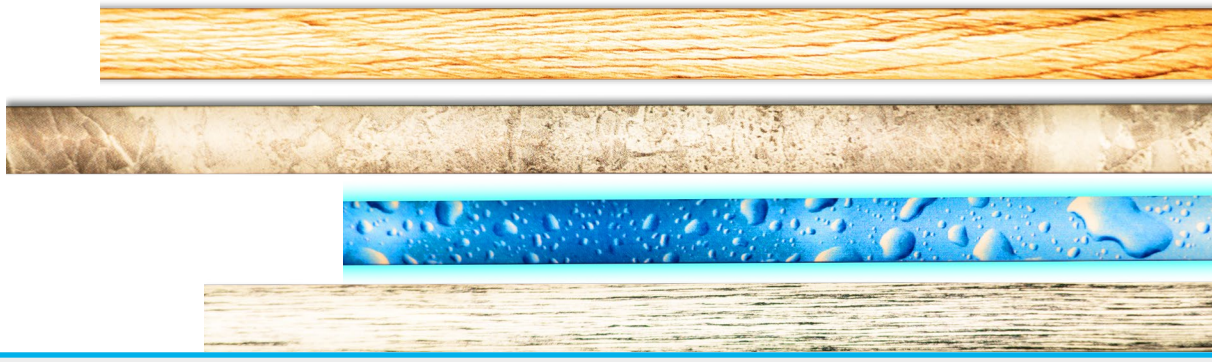
» Salt/Chlorine/Fuel/Solvent/UV texture

» High temperature resistance

High stone chip and abrasion resistance No yellowing

» Walkable and driveable

NO heat accumulation on the LED strip



OEM

WE ARE YOUR PARTNER

We develop your individual solution together with you.

We check the technical and commercial feasibility.

We calculate the minimum order quantity.

We realize your project!

You save valuable working time!

You can immediately start with the installation!

You have the certainty that your LED lighting will function reliably!

Manufactured light elements

Precise manufacturing

Delivery ready for installation

Precise - Fast - Reliable

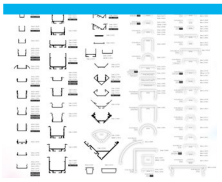
TOUCH, TRY OUT AND TEST

YOU ARE THE BRAND!
On request, we can design your sample box individually adapted to your company and your logo.

We are happy to provide our partners with professional sales tools to support their sales.

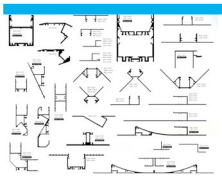
We offer you ISOLED® sample cases, stands and wall modules, which can be individually equipped and connected with our LED products according to your wishes. This way your customers can personally convince themselves of the power, appearance and feel of our brand products.

ISOLED® sample box



- Surface-mounting profiles
- profiles recessed
- Corner profiles
- covers

A0 Overviewsposter | Box cross-section



- Dry wall profiles
- Luminaire profiles
- Tile profiles
- indirect profiles

75% DISCOUNT

Samples at a special price

Each original item from the brand assortment of ISOLED® can be ordered for extensive product testing.

- Sampling discount of 75% on the list price
- once per year on each item

Individual design possible

ISOLED® Sample cases and wall modules

- LED illuminants
- LED aluminium profiles and / or LED flex stripes
- spotlight recessed (also with illuminant)
- ISOLED® Dimmer and RGB controls
- Stands with pre-assembled products

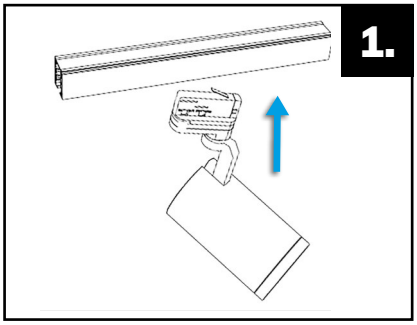
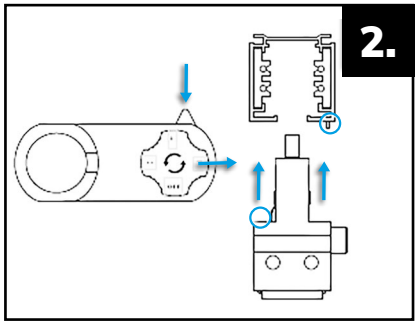
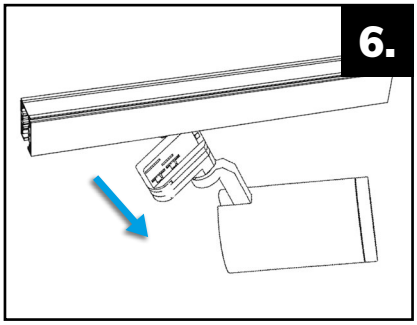
INSTALLATION NOTE







Installing the spotlight

1. When installing the spotlights, pay attention to the guidance slot. The guide of the adapter (on the spotlight) must fit exactly into the guidance slot.
2. When the spotlight is fitting correctly in the track, it can be adjusted and fixed with the locking lever.
3. Now the desired phase can be set on the rotary switch of the adapter.

Removing the spotlight

The 3-phase track spotlight can be placed quick, easy and without tools at another position on the 3-phase track.

4. The phase rotary switch on the adapter is set to position 0.
5. Now loosen the locking lever of the power track spotlight.
6. Carefully tilt the spotlight so that the locking lever moves away from the track.
7. This releases the brackets in the track and the spotlight can be conveniently removed.

HCL
DIMMING

HCL – Human Centric Lighting

HCL as an generic term for the technologies biodynamic light, sunset dimm-to-warm and CCT or dynamic white lighting, places people at the center of the lighting application.

Over thousands of years, humans have become accustomed to a 24-hour rhythm of the day. This change from light to dark, warm white light (sunrise) and cold white light (blue sky) provides the orientation for our sleep-wake rhythm. Choosing the right light color is therefore essential for a healthy daily routine.

A high proportion of blue in the visible wavelength of light inhibits the production of the hormone melatonin, which helps us to sleep in the evening. If the amount of blue is too low during the day it is a disadvantage because it makes us tired. If the possibility is available to adjust the light color individually, warm white light enables us to start the day comfortably and end it just as relaxed again.

A color temperature of the artificial lighting that mimics the course of the day has a direct positive effect on our well-being. A number of studies have shown, among other things, a faster recovery process in hospitals, reduced effects in the case of dementia and a lower error rate when working in shifts, if the artificial lighting inside the building mimics the natural course of the day from outside.

On the other hand, the user has the option of counteracting this with cold lighting in the late afternoon hours to boost the attention threshold again and actively counteract emerging tiredness if this is desired.

With the controls from ISOLED® such as our new DALI master controllers (even without an existing bus building installation), 24V DC PWM controllers from the SYS-Pro range or 230V dimmers for our Sunset Dimm-to-warm light sources, it's extremly easy to create the desired lighting mood, atmosphere and with this a lighting that focuses on people's needs - HCL!

In order to imitate the natural course of the sun, among other things, for "light alarm clocks" or cozy evening moods, our SUNSET dimm-to-warm products are able to shift their color location when dimming and reducing the brightness "into the warmer":

UGR<19

CONTROL OF DYNAMIC WHITE LIGHT SOURCES VIA PWM CCT CONTROLLER

With dynamic white (CCT) panels, spotlights recessed and flex strips *, which are operated with a nominal voltage of 24V DC, the dynamic white PWM CCT controller placed between the transformer and the light source dynamically regulates the color temperature and power between the cold white and warm white channels at a constant brightness level. When a mixing ratio is set to neutral white, for example, the controller regulates the warm white channel to 50% and the cool white channel also to 50%.

So when operating with a dynamic white PWM controller the full active power consumption and lumen output can not be achieved. We can get only a maxium of 50% here.

Tip: By using two upstream single color controllers, which operate the common anode (24V+) of the dynamic white light source together and control the two cathodes (24V-) each as a separate zone, it is possible to exploit the full power potential. This workaround should not be used to run both channels permanently at 100% - the heat generation is considerable and accelerates the aging process of the LED chips noticeably.

PS: The same applies to 24V RGB+W panels and spotlights recessed if it would be possible to address the white channel (instead of its integration into a mixing ratio) separately with full power by using an RGB controller as well as an additional single color controller if the previously used RGB+W controller or its control (remote control) does not support separate control of all four channels.

Your contact person at ISOLED® will be pleased to advise you regarding control and will provide you with the connection diagram for your individual installation on request.

*3-pole: common anode (24V DC plus) and one cathode (24V DC minus) each for the cool white and warm white channel

EMERGENCY POWER BATTERY MODULE

114377

Height	32 mm
width	100 mm
length	230 mm
Rated voltage	200-240 V AC
Battery type	Li-Ion 21.6V
Capacity	2.600 mAh
Charging time	≥ 24 hours
Charge current	max. 100 mA
Output	24 V-50 VDC
Power	15 W
Discharging time	≥ 3 hours
Ambient temp.	0°-40°C max.
Conformity	CE, RoHS, EL-T
Connections	L, N, PE 5,5x2,5 mm round plug

This module is ready to plug in and ready to connect for our panel series:

- Business line
- Professional line
- UGR<16 Line
- DECO Line

It complies with the standards summarized under the EL-T Mark and may be used to operate the panels as emergency lighting.

The emergency battery module registers nominal voltage and current, which is in normal operation flow from the transformer on the primary side via the emergency module to the connected luminaire or LED panel. In the case of a failure of the 230 V supply voltage, the emergency power module emits a constant current and a DC voltage of min. 25 V to max. 50 V from its Li-Ion battery, which corresponds to an output power of 15 W. In the case of our compatible panel series, this is approx. 400 mA for at least 3 hours!

Variable mounting options on the back

Easy and quick installation

Our new two-part bar light with its excellent price/performance ratio and variable mounting options is suitable for a wide range of applications.

The luminaire unit with its durable, rigid circuit board and diffuse cover can be removed after loosening the crash protection. For installation, the fuse and the plug connection to the integrated driver can be detached easily.

The **COLOR SWITCH Technology** inside the luminaire offers a simple selection between the three color temperatures warm white withwhite with 3000 K, neutral white with 4000 K as well as cool white with 6000 K and can therefore be individually adjusted at the point of use according to the wishes of the customer or the environment.

The mounting bar of the luminaire has a large number of pre-punched holes for variable screwing to the ceiling. Power can be supplied from the rear or the side.

A 3-pole spring-loaded plug-in terminal with two contacts each enables a quick installation and practical through- and rewiring.

The light is completely flicker-free and thus enables fatigue-free and safe working.

LED LINEAR LIGHTS

WITH 36 W AND 42 W | 130 AND 160 CM | 4.000 AND 2.700 K

FOOD SAFE | IP65 | 180°

- **Up to 23 luminaires strung together**
- **1.000 Watt without additional parallel power infeed**
- **Class II luminaires with sealed cable entry**

Motion detector

- HF motion detector reacts to any movement within a radius of 10m (adjustable from 25%-100%)
- Optimal mounting height between 2.5 and 3.5 meters
- 360° angle of detection in the direction of the front of the luminaire
- Adjustable on-time after motion detection between 5 seconds and 5 minutes
- Daylight sensitivity adjustable to 2lx, 10lx, 50lx or deactivated

LED LINEAR LIGHTS PROFESSIONAL

FROM 35 TO 60 W | 150 CM | 4.000 K

FOOD SAFE · IP66 · D · D · 5 YEAR GUARANTEE · 180°

- **Up to 25 luminaires strung together**
- **Plug-in/screw terminals on both sides, through-wired**
- **Simple and quick installation with click-system (incl. Accessories)**

Fields of application | IN- & OUTDOOR

The LED linear lights PROFESSIONAL of protection class IP66 are designed for:

- Underground garages
- Carports
- Open storage halls and parking spaces (roofed)
- Operating and workshops
- Technical and supply rooms
- Corridors and connecting corridors

POWER SWITCH

With LED diffuser luminaires employing **POWER SWITCH**

technology, the power consumption can be limited. This saves energy costs and reduces the light power.

Note: Only operate the dip switch to change the power consumption when the LED light is switched off.

GOOD TO KNOW

TOQ = Temperature Optimised Quality

The electronics are designed for 24/7 continuous operation - even at high ambient temperatures (up to 85 °C). Spotlights with this marking are ideally suited for permanently high temperatures.

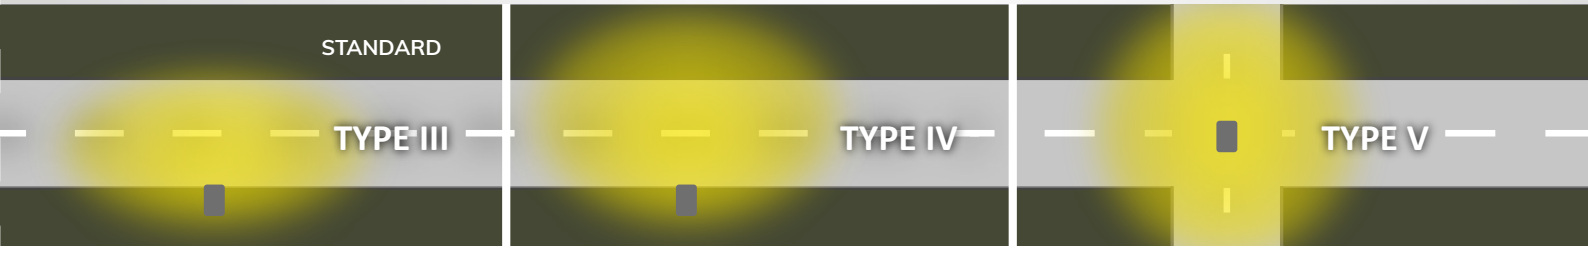
- Luminous flux: GR30 – 14.500 lm | GR60 – 14.500 lm | GR100 – 14.500 lm up to 145 lm/W
- Weatherproof IP66
- Dimmable by 1-10V DC
- 3 different types of radiation matched to the lighting task- optionally Type III / Type IV (Standard) / Type V
- Light body made of high-quality die-cast aluminium
- Impact resistant protective screen – UP TO 5 JOULES (tested in accordance with 60598-2-3, IK08)
- Optional daylight sensor (on top)
- Overvoltage (lightning) protection
- Simple maintenance – tool-free opening of the housing
- 5-year guarantee and project-specific extension of the guarantee can be offered
- Conformity: CE | ROHS | UL/cUL | FCC | SAA | DLC



Customer-specific project lighting solution We are here to advise you!

This item is available from stock in six standard designs. Optionally we can deliver this in different designs.

We look forward to your inquiry.

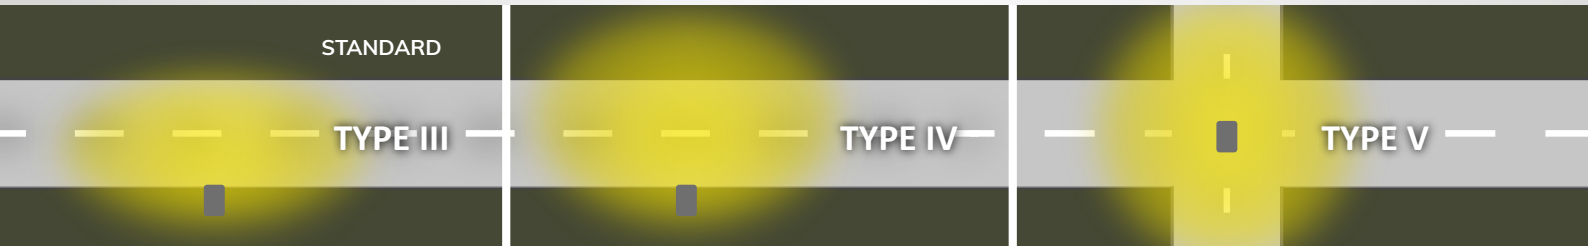
WALL ADAPTER RIGID

113769

- Luminous flux: HE75 – 10,870 lm | HE115 – 18,900 lm | up to 165 lm/W
- Weatherproof IP65
- Dimmable by 1-10V DC or PWM control signal
- 3 different types of radiation matched to the lighting task- optionally Type III / Type IV (Standard) / Type V
- Integrated driver with programming interface
- Light body made of high-quality die-cast aluminium
- Impact resistant protective screen – UP TO 5 JOULES (tested in accordance with 60598-2-3, IK08)

Lorem ipsum

- Optional daylight sensor (on top) Optional DALI dimmable
- Optional 2 in 1 sensor for daylight and motion detection (on the bottom) available
- Optional overvoltage (lightning) protection
- Extensive adapter and mounting accessories- suitable for mast and wall mounting
- Simple maintenance – tool-free opening of the housing
- 5-year guarantee and project-specific extension of the guarantee can be offered
- Conformity: CE | ROHS | UL/cUL | FCC | SAA | DLC



Customer-specific project lighting solution We are here to advise you!

This item is available from stock in two standard designs. Optionally we can deliver this in different designs.

We look forward to your inquiry.

Contact your competent LED professional from ISOLED® with confidence.

Top LED light quality for sports and leisure from planning to commissioning

"As a customer at ISOLED, you have the feeling that you always come first. Thanks to a competent office and field service, you feel well looked after at all times. "

Feedback from customer survey 2022

Foundation information

7. Basic wiring by electrician*

You receive technical information for processing

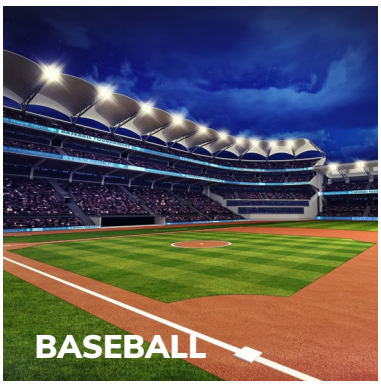
8. Delivery

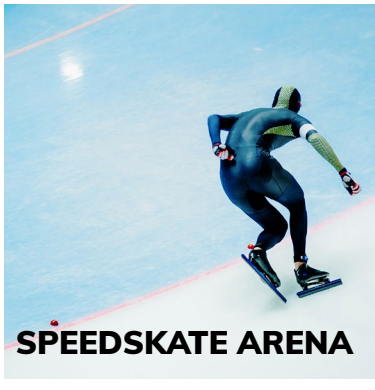
Floodlights & Masts

9. Final assembly*

You will need an electrician on site for the installation, a construction company, possibly a structural engineer and a fitter for the installation of the floodlights on trusses (risers are required) Carrying out a lighting performance check

*We support you in this project step





ISOLED
CUSTOMISED LIGHT SOLUTIONS

Sports fields and ski slopes
Outdoor & Indoor

Longlife use up to 100.000 h

5 YEARS GUARANTEE

Requirements

Top LED light quality for sports and leisure

Dynamics, speed, different game situations, rapidly changing slope conditions, the individual visual performance of the athletes and much more place special demands on optimal LED lighting.

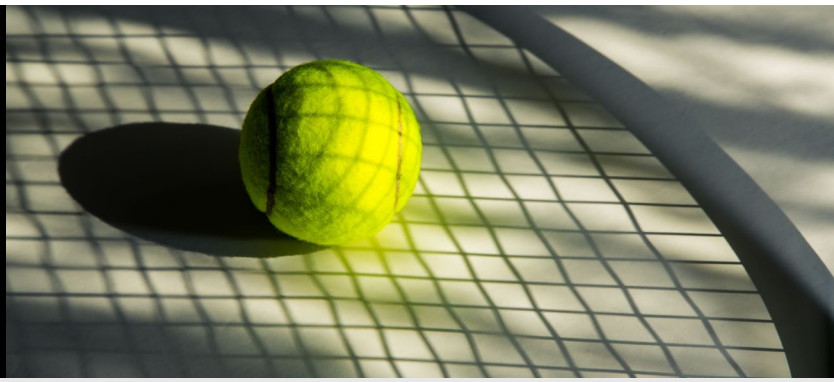
Athletes need to be able to get used to the light in their environment very quickly. They need sufficient illuminance (lux) on the surface they play on or ride on in order to be able to practice their sport successfully and, above all, as injury-free as possible.

The operator of the sports facility or ski slope defines the lighting class of the LED lighting solutions to be installed, which must be achieved due to the sports operation.

HIGH CONTRAST COLOR REPRODUCTION

HIGH QUALITY OF LIGHT

EXCELLENT, AREA-WIDE ILLUMINATION OF THE PLAYING FIELD (MINIMUM LIGHT SCATTERING LOSSES)



LEVEL OF COMPETITION	LIGHTING CLASS		
	I	II	III
International/National	X		
Regional	X	X	
Local	X	X	X
Training		X	X
Recreation/School Sports			X

Available in our assortment

Floodlightsystems of the **Lighting class I** are possible on request according to individual planning

All specifications and technical data are subject to change without notice of standards and classifications. No assumption of liability.

SOCCER

Especially when the days are getting shorter and training takes place in the evening hours, a floodlight system is a must have on every soccer field. With LED floodlights from ISOLED® you can illuminate your sports field perfectly and save a lot of energy compared to conventional halogen lamps. We will be happy to advise you on the possibilities of subsidies!

OUTDOOR FACILITY	MAIN AREA / TOTAL AREA		
	Length m	Width m	Calculation grid
SOCCER	105 m / 113 m	70 / 78 m	21 x 15 measuring points
SMALL PITCH FOOTBALL	35 m / 44 m	19 / 24 m	15 x 9 measuring points

The photometric requirements depend on the lighting class.

Permissible lighting class	average horizontal illuminance		Ratio min. to average illuminance		Glare rating GR	Color rendering CRI Ra
I	min. 500 Lux	=> 75%	min. 0,7	=> 0,5	max. 55	min. 70

ISOLED® FLOODLIGHT - TOP LED LIGHT QUALITY!

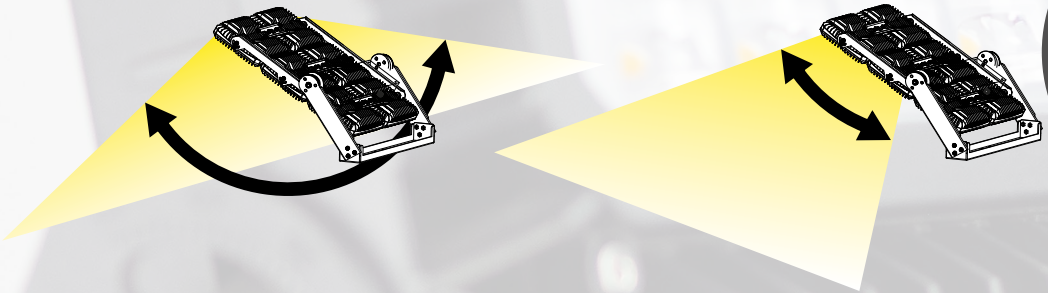
As experts in LED products, we stand for quality.

OUR FLOODLIGHT FEATURES HIGH ENERGY EFFICIENCY AND RELIABLE PERFORMANCE.

Asymmetrical beam angle FOR LIGHT WHERE IT IS NEEDED

beam angle on side: 130

Beam angle front: 25°/40



SUSTAINABILITY GUARANTEED

Simplifies the approval process procedure

- **Excellent luminous efficacy of up to 142 lumen per watt**
- **Sustainable binning (SDCM < 3) for uniform light quality**
- **High End LED Chips of the latest generation**
- **Maintenance-free luminaire body of protection class IP66 made of high-quality aluminum and impact-resistant PC (IK10)**
- **The electronic support > 30,000 switching cycles. Immediate restart, e.g. after a power failure, is possible**
- **No pre/post time for warming up or cooling down as with conventional lighting systems.**
- **Intelligent thermal management for long life/operating time**
- **Reliable brand transformer from Meanwell | With surge protection**

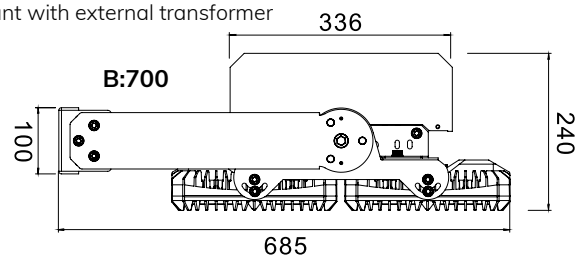
114935 Variant with external transformer



Special features:

Transformers 4 x Meanwell ELG-C

1.050 mA, incl. surge protection 10 kV,

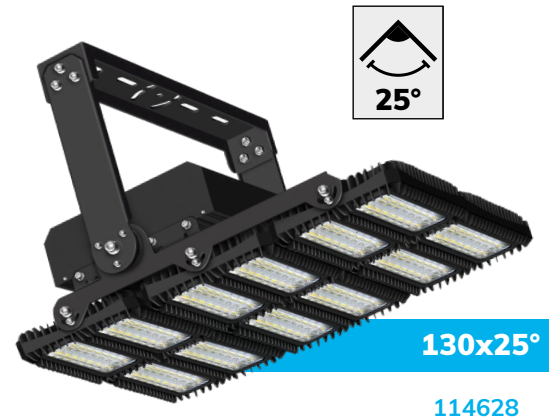
Service life 100,000 h,

Beam angle 130 x 25° or 130 x 40° asymmetrical,

Luminaire modules variable, incl. protective cable sheathing

LED flood light 1350W

1,350 watts | 130 x 25 ° / 130 x 40 ° | asymmetrical | variable | 1 - 10 V dimmable | neutral white | IP66



114628

Variant with external transformer
114967

114629

Special features:

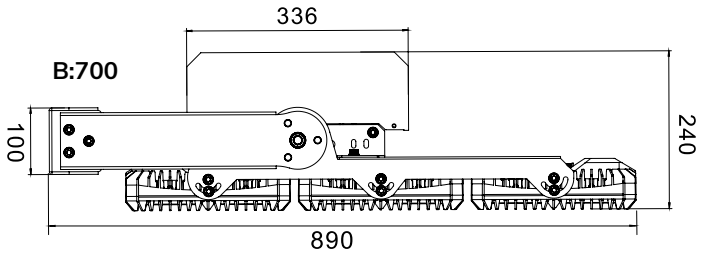
Transformers 6 x Meanwell ELG-C

1050 mA, incl. surge protection 10 kV,

Service life up to 100,000 h,

Beam angle 130 x 25° or 130 x 40° asymmetrical,

Luminaire modules variable, incl. protective cable sheathing



Accessories

The accessories facilitate the precise alignment of the light cone on site.

Angle bubble
For locking the inclination exactly to the degree. The angle spirit level is included with every spotlight.

Alignment telescope for LED floodlights
For precise alignment of the light cone.

114859

Light poles

Floodlight pole conical with traverse

The conical round light pole consists of a formed and longitudinally welded steel sheet, which is hot-dip galvanized with a minimum steel quality of S235 JR and according to DIN EN ISO 1461.

The pole is statically designed individually for the installation site and adapted to the floodlights used in each case. The poles are given a door cutout

with inserted steel door and triangular lock made of V2A, edge length 12 mm.

A cable junction box can be accommodated using a device bridge and sliding nuts inside the pole. Two openings for cable entry are located opposite one another in the ground piece.

The light poles and crossbars for outdoor installations are designed for wind zone 2, the light poles for ski slopes for wind zone 3.

If necessary, the transformers can be mounted in the pole.

Further mounting options directly on the luminaire or in a separate connection cabinet with separate cable routing.

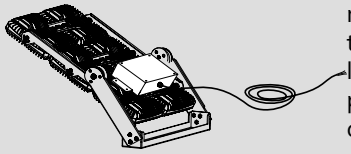
Delivery free of freight charges for 4 poles or more

Poles are dimensioned specifically for the project

We make foundation suggestions when purchasing ISOLED® Poles

Mounting variants transformer

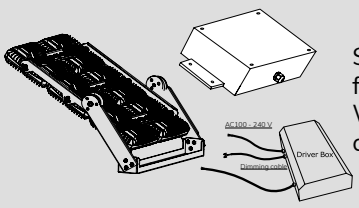
Integrated variant



Integrated transformer box for mounting directly on the luminaire. Waterproof connections are required.

Mounting variants transformer

External variant



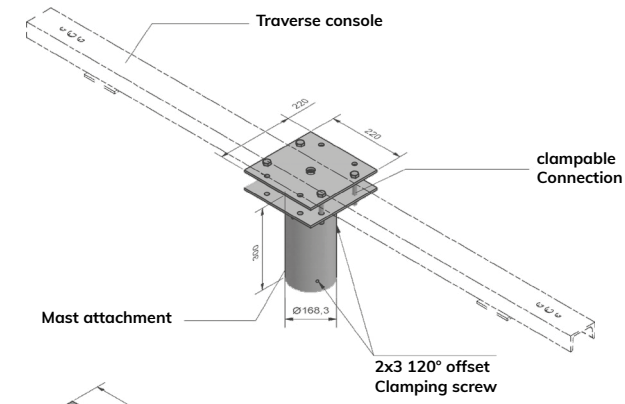
Separate transformer box for external installation. Waterproof connections are required.

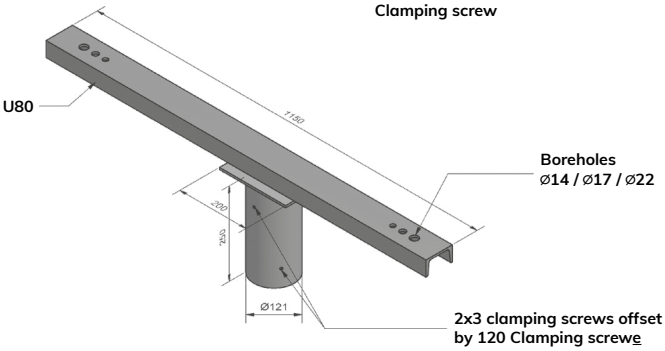
MAINTENANCE FLAP

Flap for wiring / opening on both sides for cable routing

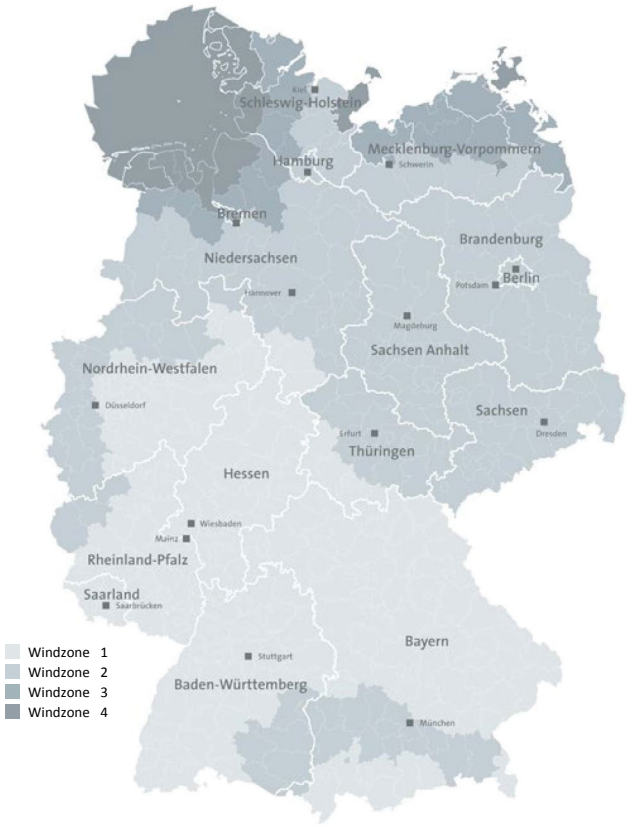
TRAVERSES

For mounting and alignment of LED floodlights

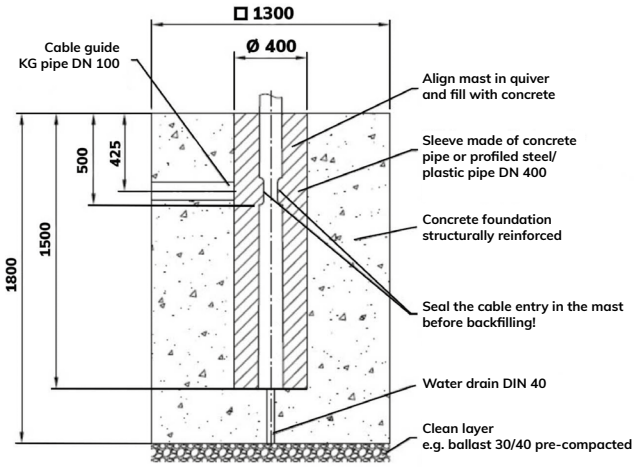




Wind zones using the example of Germany



Example of proposed foundation for tennis court and soccer field



114735	For 1 floodlight, galvanised steel, height above ground 8 m
114733	For 2 floodlights, galvanised steel, height above ground 12 m
114734	For 2 floodlights, galvanised steel, height above ground 15 m
114732	For 3+2 floodlights, galvanised steel, height above ground 15 m
114736	For 4+2 floodlights, galvanised steel, height above ground 15 m

Please note that the foundation recommendations of Europoles are based on calculations with standard loads and are therefore without guarantee. Assumption: Normal grown soil without water buoyancy

Strong lights with up to 5 years guarantee
The right lighting for a professional working environment

Not only the products, but also great delivery times and fast returns processing convinced us of ISOLED."

CUSTOMISED LIGHT SOLUTIONS

Exchange from G24 LED instead of energy-saving lamp

QUICK | CHEAP | EFFICIENT | SUSTAINABLE!

The downlights item no. 112000, 112002 (image on previous page) and the item no. 113167 and 113168 are ideal for the cost effective, quick and sustainable conversion of conventional G24 downlights with CFL (Compact Fluorescent Lamp) to the efficient LED technology..

113167 | LED Downlight reflector 30W, 60°, CRI95, UGR<19, neutral white

SIMPLE AND PRECISE INSTALLATION OF THE SUSTAINABLE LED LIGHTING SOLUTION

1 PLASTERING IS POSSIBLE

The luminaire can be used in the wall with a common 68 mm plaster box (i.e. hole/recess in solid wall with 68 mm diameter). The product is supplied with a flush-mounted box with a hole cutout of 72 mm and a depth of 67 mm.

2 INSTALL. IN CAVITY WALL

The luminaire can be screwed directly into cavity walls. This requires a hole cutout of 59 mm.

3 INSTALLATION WITH SPRING

Another option is mounting in drywall with optional recessed spring. A hole cutout of 63 mm is required for this.

LED OUTDOOR LIGHTS

LED light stripes outdoor

LED LIGHT STRIPES OUTDOOR

PREMIUM PUR-FULLY CAST

Multilevel Full casting process

In order to be able to operate linear LED lighting concepts safely and trouble-free in wet cells, damp rooms, outdoor areas and especially under water, at least protection class IP67 must be guaranteed.

Absolutely waterproof

We achieve this absolute waterproofness with the fully cast LED aluminium profiles with synthetic resin (PuR - polyurethane). In a unique process, liquid two-component PuR is fed with extreme precision in six layers directly into the profile (in the case of 3-component PuR coloring - e.g. opal). The multi -step application of the heated resin prevents air bubbles, inclusions and cracks..

Protection for Chip and Electronics

The resin covers the LED Flex stripes, the connection cabling as well as the total inside space of the profile and is flush with the top and side edges. The linear LED light component is now sealed and absolutely waterproof. Further advantages are the protection of the LED chips and the electronics as well as the reduction of the mechanical voltage of the aluminium profile.

excellent properties for sustainable added value!

- Sealing: Protection class IP67
- Salt/chlorine/fuel/solvents/UV-resistance
- High temperature resistance
- High stone chip and abrasion resistance
- No yellowing
- accessible and drivable
- NO heat accumulation on the LED strip

LED lights with integrated battery

Emergency light operation 3 hours

Integrated battery

Automated self-tests

The ISOLED® Emergency lighting/escape route luminaires comply with the EN 50172:2005 and EN 1838:2019 standards

EMERGENCY LIGHT OPERATION 3 HOURS

Safety in case of emergency

In the event of a power failure or failure of the general power supply or lighting system, enough lighting (emergency lighting) must be ensured to safely exit the building or to avoid panic.

European standard for labelling

The legal requirements regarding lighting requirements and marking of escape and rescue routes are regulated in the Euro-pean standards EN 50172:2005 and EN 1838:2019.

Recommendation for planning

When planning an emergency lighting system in your building, we recommend that you consult an expert in this field. We would be happy to put you in touch with a partner in your area.

LED panels and Linear-Diffuser luminaires with Battery Pack
ISOLED® Luminaires with integrated rechargeable battery pack (see Page 389 85 Battery module for LED panels and page 109 Professional Linear-Diffuser luminaire) ensure basic lighting in offices, workshops, basements and underground car parks in the event of a power failure, even without an emergency power supply unit or central battery system.

UNI4 and UNI7 emergency light/escape route luminaires conforming to standards
With our two emergency light/escape route luminaires uNI4 and uNI7, which have a recognition range of 20 and 18 me-tres respectively and four adhesive escape signs (up/down/left/right arrows), you can implement the marking and sig-nage of escape and rescue routes safely and in accordance to standards.

Integrated battery for 3 hours emergency operation
The uNI4 LED light is equipped with a 1.500 mAh Ni-cd battery and the uNI7 with a 1.900 mAh battery, which allows a battery operation for more than 3 hours in case of power failure (charging time approx. 24h).

If the power supply is maintained, a switched continuous operation is optionally possible.

Automated self-tests replace manual function checks
The lights carry out a self-test after initial installation, a function test once a week, 36 hours after initial installation and an endurance test once a year. This eliminates the periodically prescribed and time-consuming manual function checks.

Note on the operation display
Manual tests can be initialized at any time by pressing the in-tegrated test button. Correct operation is indicated by a green signal LED, errors by a red signal LED.

Guidelines for emergency light/escape route luminaires

Basically, the following applies to emergency lights and escape route luminaires etc:

- **Positioning at least 2m above the ground** (viewable from both sides)
- **Distance <2m for each exit door to be used in an emergency**
- **Distance <2m for every stair, height or direction change**
- **Escape signs must be illuminated in the event of a power failure**
- **Distance <2m at any first aid kit or fire alarm point**
- **Minimum illuminance on escape and rescue routes is 1 lux on the ground,**
- **where the ratio of maximum to mini-mum illuminance must be <40:1.**
- **(At machines or places with special hazards 15lx at light median <10:1)**

Note on planning emergency lighting systems
When planning an emergency lighting system, we re-commend consulting an expert in this field who can gua-rantee compliance with all European standards.

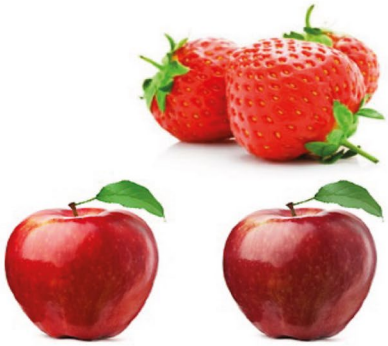
CRI RA & CRI R9

The CRI (color rendering index) value indicated for an artificial light source gives information regarding how true to nature colors will be under this light compared with natural sunlight (CRI 100).

As is usual in the market, the CRI value however only relates to the reproducti on of the TCS (Test color Samples) pastel color tones R1 to R8. However not the TCS R9 color tone "saturated red". A light is allowed to have a high CRI Ra with an index >90 for R1 to R8 and still a low CRI R9 of e.g. <30. So even though high color fidelity may be present, the object in view does not look especially "lifelike".

Note: A prominent red portion in the color spectrum does not automatically mean a high CRI R9 index. The complete color spectrum of a light source must be correct in order to produce natural color reproducti on.

Under a light with CRI 95 and R9 89



Under a light with CRI 90 and R9 24

Reproduction of the TCS 1-15 of a typical light with CRI 82.

Based on the low CRI R9 value, red color tones and particularly the human skin look rather pale and matt under this light source.

Reproduction of the TCS 1-15 of a full spectrum light with CRI 98

Both the pastel and full tone colors and especially red color tones are reproduced very true to nature due to a high CRI R9.

LED ILLUMINANTS

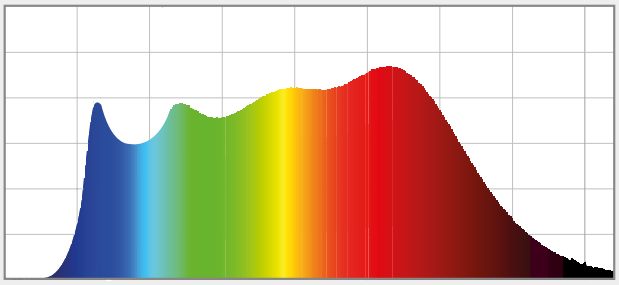
GU10

ISOLED
CUSTOMISED LIGHT SOLUTIONS

FULL SPECTRUM | CRI> 98

Excellent color reproduction - corresponds 98 % to natural sunlight!

The new full-spectrum LEDs have almost identical color spectrums as natural sunlight. In contrast to the common LEDs, the color spectrum of the new full-spectrum bulbs does not feature a peak typical for LEDs in the blue color range.



Full spectrum CRI> 98

GOOD TO KNOW

TOQ = Temperature Optimised Quality

The electronics are designed for 24/7 continuous operation- even at high ambient temperatures (up to 45 °C). Spotlights with this marking are ideally suited for ground installation spotlights or luminaires closed at the rear.

LED THERMAL MANAGEMENT

ATTENTION - IMPORTANT NOTES

100 % Nominal service life with correct thermal management

1. Observe and strictly adhere to the manufacturer's specifications regarding ambient temperature limits! Also applies to switched off or stored Luminaire and illuminants.
2. Especially in closed LED Luminaire ensure enough natural air circulation (convection)!
3. Ideally, the warm air must be able to escape through an opening on the top or be dissipated via an integrated thermal bridge or a heat sink.
4. Keep the distance between lamp and housing according to the manufacturer's instructions.
5. The rear sides of integrated heat sinks must not be covered.
6. AVOID continuous direct or indirect sunlight (via reflectors such as reflective metal or glass surfaces)!

Frequent effects due to excessive ambient temperature

- Increased flickering (subconsciously perceptible)
- Visible flashing (consciously perceptible)
- Audible whirring
- Massive deterioration in color reproduction (CRI value falls)
- Color location shift (the color temperature becomes significantly colder)
- High inrush currents
- Worsened dimming behaviour
- Partial to complete failure of LED chips
- Burnout of LED chips

These negative effects can occur aftera very short operating time.

Therefore please note our recommended ambient temperatures in the data sheets!

ATTENTION - IMPORTANT NOTES

100 % Nominal service life with correct thermal management

1. Observe and strictly adhere to the manufacturer's specifications regarding ambient temperature limits! Also applies to switched off or stored Luminaire and illuminants.
2. Especially in closed LED Luminaire ensure enough natural air circulation (convection)!
3. Ideally, the warm air must be able to escape through an opening on the top or be dissipated via an integrated thermal bridge or a heat sink.
4. Keep the distance between lamp and housing according to the manufacturer's instructions.
5. The rear sides of integrated heat sinks must not be covered.
6. AVOID continuous direct or indirect sunlight (via reflectors such as reflective metal or glass surfaces)!

LED ILLUMINANTS

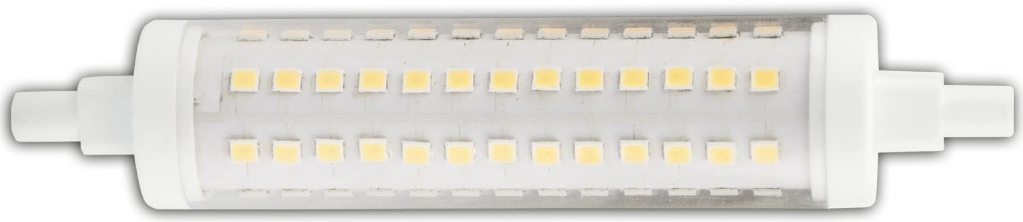
R7s



The glass cover in the picture above the R7S bar, which is still installed in most R7S lights, can be omitted when using LED technology.

If the glass cover is not inserted, the heat of the LED bulb can be emitted much better into the environment. This benefits the lifespan of the LEDs.

Annotation:

Halogen-filament R7S bulbs became very hot and tended to rupture after a period of use. For this reason, the glass cover was indispensable as protection against contact and splinters. With LED lights this is no longer necessary.

COMMUNICATION STANDARD FOR BUILDING AUTOMATION

KNX

KNX is the successor standard of EIB (European Installation Bus).

Operational lighting devices, sensors, roller shutter doors, door openers, heating controls, buttons and so on with the corresponding interface have their parameters set and are coupled together with the aid of an ETS (engineering tool soft ware) by the electrical installation technician carrying out the work.

The bidirectional communication and signal transmission is generally done via a separate, four-pole shielded KNX sheathed cable which is laid in a delta or tree circuit. The operating conditions of the individual devices (max. 256 address in a line) are now often presented in a visualisation on a touchscreen, with the option for simple interaction.

DALI

A DALI signal is very frequently used for simple and uncomplicated control of lighting and lighting scenes in building controls.

Devices with a DALI interface (mainly limited to light operating devices, sensors and buttons for lighting applications), are assigned unique DALI short addresses (up to 64 per line), which are used by the DALI control unit to query the status of the lights and operating devices (bidirectional communication) and set the desired operating condition.

An advantage of the DALI standard is that for signal transmission for example two conductors within a 5-pole sheathed cable can be used, i.e. The insulated but unshielded signal cable can be located in parallel next to a current-carrying cable without worrying about the communication being disrupted by unavoidable induced voltages. This significantly simplifies the building installation and cabling.

The DALI control signal itself comes from a corresponding gateway (this is usually a KNX to DALI coupler/signal converter) or a standalone push button or control device. The dimming behaviour (linear or algorithmic) as well as the PowerOn behaviour and soon of an operating device, if required can have its parameters set directly to those on a DALI interface with the aid of a so-called DALI USB mouse and corresponding soft ware.

0 / 1-10V CONTROL SIGNAL

KNX and DALI have a digital voltage signal, with 0/1-10V an analogue or pulse-modulated unidirectional control voltage via a two-pole cable installed in a delta, tree or ring-shaped configuration (max. 60 metres)

Operating devices with a 1-10V control signal inputare generally significantly more cost-effective than those with a KNX or DALI input. Professionals often take advantage of this as follows: Multiple operating devices with 1-10V control signal input on a lighting circuit are combined and a DALI provided upstream on a 1-10V signal converter. In this way, this group is controlled via a common DALI address and controlled/ dimmed; it is generally very unusual to need to control individual lights.

A 0-10 V control signal can be provided by a motion sensor with a corresponding signal output, with the lighting controlled e.g. only being activated in the presence of persons, and additionally being dynamically adjusted to the ambience light level (daylight control).

It must be mentioned that the disadvantage of a 0/1-10V control signal is that if the signal cable is laid parallel to cables carrying voltages and with the use of an unshielded control cable, induced voltages and therefore changes in signal condition could arise. Also with this signal it is also not essential to switch off each individual light or a lighting unit, but instead often just “dimming”. In this case the light must be switched on and off via a separate 230V relay. Despite all of this the lighting control method with this signal provides the best ratio of costs to benefit.

PUSH INPUT

In addition to a radio, DALI or 1-10V control signal, many dimming actuators and transformers in our range can also be operated via a push-input or an additional connection contact. This is always a closing contact of a returning pushbutt on switch.

If the option and selection is available, for lighting control we always recommend a light operating device with one of the control signal interfaces mentioned above, in preference to a dimmer unit placed upstream (primary side) or after the transformer (secondary side). This already allows possible undesirable accompanying effects to be eliminated upfront, such as flickering or transformer buzzing due to incompatibilities of the devices used.

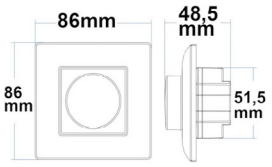
LED CONTROLLER

Signal converters

114546 | Sys-Pro 1 zone built-in rotary knob radio dimmer with 0/1-10V output, 350W switching relay, 85-265V

nominal power **85-265V AC** protection class **IP20**
ambient temp. **-30° - 55°**

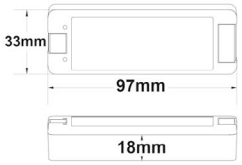
Length: 86mm rec. depth: 35mm
Width: 86mm
Height: 48,5mm



114463 | 0/1-10V Input PWM controller, 1 channel, 5-36V DC 8A, 48V DC 4A

nominal power **5-48V DC** protection class **IP20**
ambient temp. **-30° - 55°**

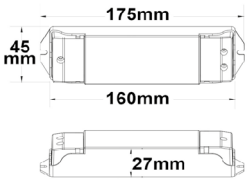
Length: 97mm
Width: 33mm
Height: 18mm



114464 | Sys-Pro 1xpush/4x1-10V input PWM dimmer, 4 channel, 12-36V DC 4x5A

nominal power **12-36V DC** protection class **IP20**
ambient temp. **-30° - 55°**

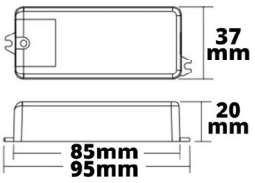
Length: 175mm
Width: 45mm
Height: 27mm



115063 | ZIGBEE to DALI DT6/DT8 or 0/1-10V signal converter + 5A switching relay, 110-240V AC

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

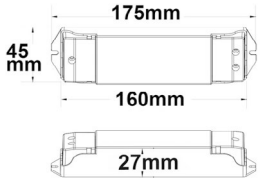
Length: 95mm
Width: 37mm
Height: 20mm



114431 | Phase angle (40-230V)/Push input signal to PWM controller, 1 channel, 12-48V DC 15A

nominal power **12-48V DC** protection class **IP20**
ambient temp. **-30° - 55°**

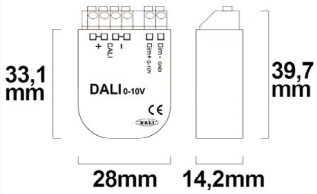
Length: 175mm
Width: 45mm
Height: 27mm



113551 | DALI to 0-10V/1-10V signal converter

protection class **IP20**
ambient temp. **-20° - 50°**

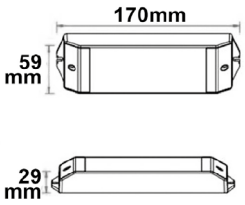
Length: 39,7mm
Width: 28mm
Height: 14,2mm



112623 | DMX512 RDM 8/16 bit decoder, 1-5 channel, 12-36V 5x5A, 48V 5x1.5A

nominal power **12-48V DC** protection class **IP20**
ambient temp. **-20° - 40°**

Length: 170mm
Width: 59mm
Height: 29mm



111632 | Mini RGB (PWM) amplifier, 3 channel, 12-24V DC, 3x4A

nominal power **12-24V DC** protection class **IP20**
ambient temp. **-20° - 40°**

Length: 98mm
Width: 45mm
Height: 18mm

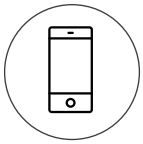
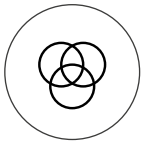
COMPREHENSIVE CONTROLLER + TRIAC / PWM-DIMMERSYSTEM

RADIO RANGE UP TO 30 METER

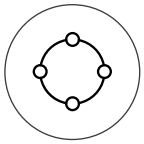
EVERY RECEIVER = REPEATER (MESH!)



FREE ISOLED® SMART-PHONE APP



SINGLE COLOR / RGB / RGB + W / RGB + CCT



WITH MEMORY + SCENE FUNCTIONS

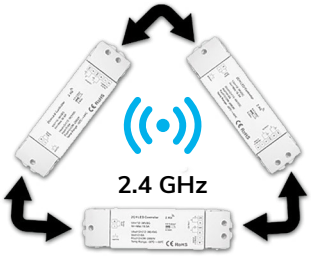
GOOD TO KNOW

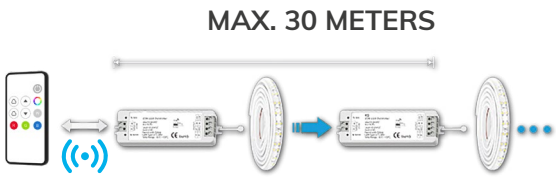
The 2.4GHz radio wave of the SYS-PRO components reaches up to 30 meters under optimal conditions. However, to ensure optimal reception of control commands, the following points should be observed:

- Do not place radio receivers in corners or angles! The more open and free the environment the better the reception.
- Do not place the radio receiver in the immediate vicinity of transformers or other live lines, as their electromagnetic radiation during operation can considerably interfere with reception.
- If radio transmitters or wall remote controls are placed in recessed boxes, neither the recessed box nor the push-button of the switch range should be made of metal and - in the case of cavity walls - the installation location should not be directly or in the immediate vicinity of a metallic bracing of drywall profiles
- In the event of errors in connection with battery-operated remote controls, please check the charge status of the button cell and replace it in good time.
- A functioning mesh network, i.e. the transmission of the incoming radio control signal from one receiver to the next can in principle only be guaranteed between one and the same receivers.

All SYS-PRO PWM dimmers operate at a flicker-free frequency of 500Hz. If the upstream transformer begins to "hum" when dimming (the reason for this is the coils and chokes installed in the transformer), we recommend the selection of a multi -PWM dimmer (art.nos. 114433, 114434) where the operating frequency is set to a level which does not cause any interference (250Hz, 500Hz, 2kHz or 8kHz).

up to 10 different remote controls or 10 zones





Details

RADIO FREQUENCY 2.4 GHZ

Wifi networks are not disturbed, since only extremely short radio pulses are transmitted.

All radio receivers act as so-called mesh transceivers, i.e. they transmit the incoming signal again within a radius of up to 30 meters.

All radio receivers act as so-called mesh transceivers, i.e. they transmit the incoming signal again within a radius of up to 30 meters.

One remote control can control any number of receivers as long as they are within the transmission range of the remote control or the receivers receive the forwarded signal of the remote control via intermediate mesh transceivers.

Standard PWM frequency 500 Hz (adjustable at Multi -PWM dimmers to 8kHz, 2kHz, 500Hz, 250Hz).

ZIGBEE

Smart lighting control - simple and future-proof

ZIGBEE is a manufacturer-independent wireless communications standard for SMART-(LIGHT)-

SOLUTIONS (building automation, sensor networks etc). It eliminates other technologies and is leading the way in the market, making it a future-proof choice.

ZIGBEE facilitates exceptionally simple and intelligent control using a suitable wireless controller, mobile end device (such as a smartphone) or virtual assistant.

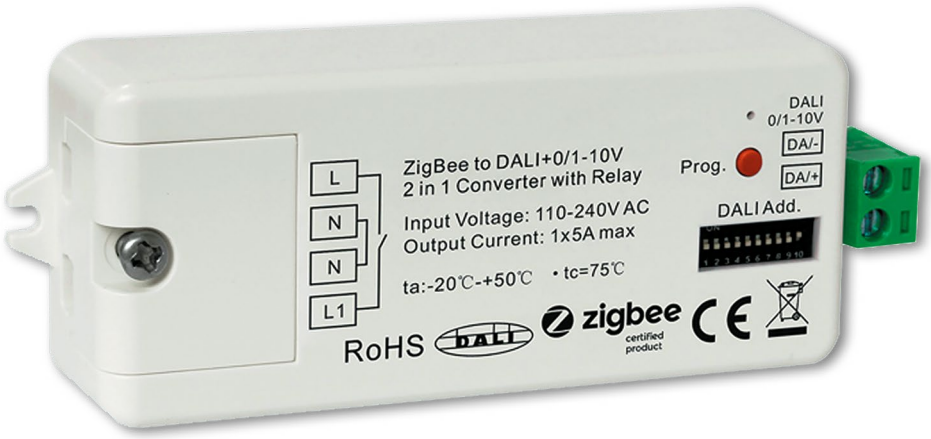
Existing installations can be made sustainably SMART with minimal cabling!

Intelligent lighting control without a system bus

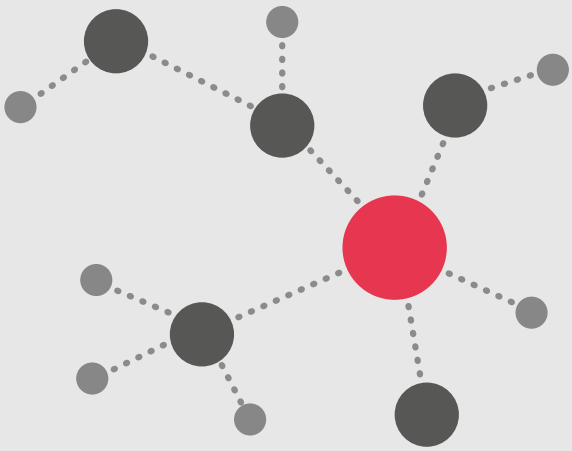
- Future-proof, sustainable remote control system
- Hundreds of manufacturers in the ZIGBEE network
- Maximum flexibility in installing the network
- Use-triggered (motion sensors, time switch) and daylight-triggered lighting can be set for high efficiency and cost effectiveness
- Lighting solutions designed for industry and commercial complexes can be easily implemented with ZIGBEE
- Cost-effective conversion to intelligent (smart) lighting control
- Requires minimal cabling and generally no changes to the building
- Low energy consumption for ZIGBEE control system (low operating costs)
- Simple and intuitive operation with mobile end devices (smartphones and tablets) or virtual assistants (e.g. Alexa)

LED CONTROLLER

ZIGBEE controllers



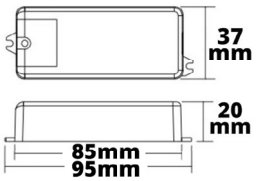
The new Zigbee 3.0 standard replaces the old ZigBee ZLL standard. ZigBee 3.0 is now better compatible with several "bridges" from different manufacturers. Devices with this technology also communicate in a mesh network. Mesh means that the transmitted control signals from the dimmers or controllers are not only received, but also transmitted to all additional similar devices in the environment and transmission range. This increases the transmission distance enormously and helps to avoid dead spots.



115063 | ZIGBEE to DALI DT6/DT8 or 0/1-10V signal converter + 5A switching relay, 110-240V AC

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

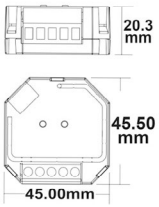
Length: 95mm
Width: 37mm
Height: 20mm



114728 | ZigBee 3.0/Push Universal Triac Dimmer 230V, 200VA

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

Length: 45mm
Width: 45,5mm
Height: 20,3mm



114729 | ZigBee 3.0 PWM controller for LED flex ribbons/spots, 5 channel, 12-24V DC 5x4A

nominal power **12-24V DC** protection class **IP20**
ambient temp. **-20° - 50°**

Transformer 48V IP20 - IP67

SPECIAL FEATURES OF LED TRANSFORMERS EXPLAINED SIMPLY

Constant current transformers

(CC - Constant Current) with a constant current exit (partially adjustable) and a variable voltage exit as component included in delivery or as alternative or replacement of existing external transformers (drivers/ballasts) for the operation of LED chips in downlights, panels, installation spots etc.

AC transformers

(AC - Alternating Current) with constant 12 V voltage at the exit and a variable exit current for operating 12 V illuminants/spots with at least one integrated resistance for current limitation and an integrated rectifier circuit which converts the AC voltage from the transformer into a DC voltage suitable for operating the LED.

It should be noted that the operation of LEDs (because they are capacitive loads) in conjunction with AC voltage produces a reactive power. This means that not only the active power rating in watts of the connected illuminants must be used for the power design of the transformer, but also the total apparent power in VA!

The special feature of our two AC transformers (Item no. 111213, 112669) is their dimmability and that no minimum load is required - a single 2W G4 lamp already works on them.

Caution: If a TRIAC dimming actuator is connected in front of one of these two transformers, the effect can occur that the reactive power is additionally increased when dimming (depending on the dimming actuator, the lamp and the degree of dimming). In extreme cases, the actual apparent power can be 3 times higher! If this fact is taken to heart, there is nothing to stop you from using our two blue AC transformers with their fantastic price/power ratio.

DC voltage transformers

(DC - Direct Current) with a constant voltage exit (partly adjustable) of 12, 24, or 48 V and variable exit current for the operation of 12 V illuminants/spots and flex stripes, which have besides the LEDs only at least one resistance for current limitation (or IC for current adjustment in case of our LED flex stripes of the CC-series) with on board and thus on their PCB/board.

The following should be noted:

- Never operate all transformers up to their power limits, i.e. ideally always calculate with a power reserve of approx. 20 %! The same applies to dimming actuators, flex stripes controllers etc.
- Operate all transformers and control gear only within their parameters regarding ambient temperature and protection class!
- Never cover transformers with thermal insulation materials and place them at enough distance from each other!
- Do not energize each transformer until all components are connected. Do not carry out any manipulations (setting the exit current, ColorSwitch etc.) during operation, but always disconnect the supply voltage beforehand.!

LED TRANSFORMERS

Constant current transformers

114692 | LED constant current transformer 100/180/270/350/440mA, 10W, Push/0-10V/DALI dimmable

Transformer 12 V/DC 20 Watt

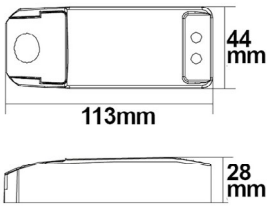
Ultra slim

NEW

111213 | LED transformer 12V/AC, 0-70VA, dimmable, SELV

nominal power **230V AC** protection class **IP20**
ambient temp. **-20° - 50°**

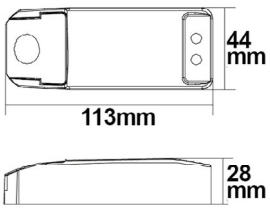
Length: 113mm
Width: 44mm
Height: 28mm



112669 | LED transformer 12V/AC, 0-105VA, dimmable, SELV

nominal power **230V AC** protection class **IP20**
ambient temp. **-20° - 50°**

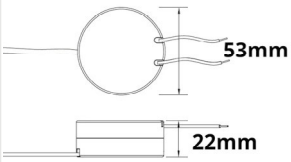
Length: 113mm
Width: 44mm
Height: 28mm



111736 | LED transformer 12V/DC, 0-8W, round design, SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

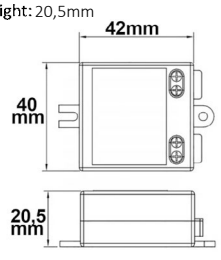
Height: 22mm Dia.: 53mm



113421 | LED transformer 12V/DC, 0-10W, SELV

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 40°**
service life **35000 h** L70|B10

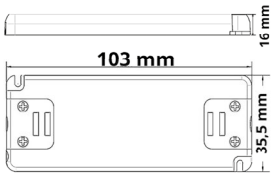
Length: 42mm
Width: 40mm
Height: 20,5mm



113049 | LED transformer 12V/DC, 0-15W, ultra flat, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 40°**

Length: 103mm
Width: 35,5mm
Height: 16mm



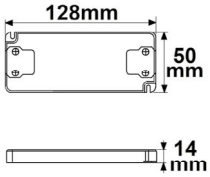
F M W W 110 SELV

115622 | LED transformer 12V/DC, 20W, Ultraslim

nominal power **220-240V AC** protection class **IP20**
active power **20 W** ambient temp. **-20° - 40°C**

NEW

Length: 128mm
Width: 50mm
Height: 14mm

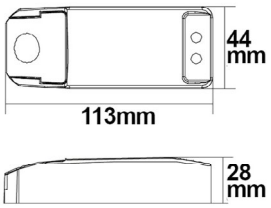


110 SELV

111116 | LED transformer 12V/DC, 0-20W, SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 40°**

Length: 113mm
Width: 44mm
Height: 28mm

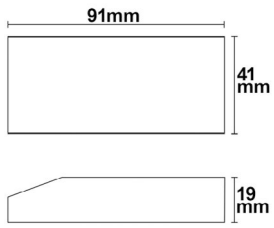


F M W W 110 SELV

113918 | LED transformer 12V/DC, 0-30W, compact, SELV

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 40°**

Length: 91mm
Width: 41mm
Height: 19mm

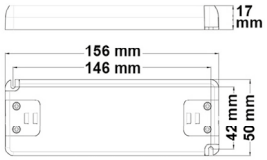


F W W SELV

112016 | LED transformer 12V/DC, 0-30W, ultra flat, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 40°**

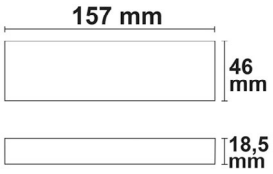
Length: 156mm
Width: 50mm
Height: 17mm



113926 | LED Flexband transformer 12V/DC, 0-30W, dimmable (voltage sink), SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 45°**

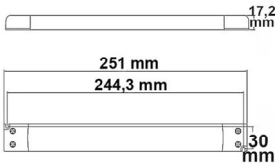
Length: 157mm
Width: 46mm
Height: 18,5mm



113286 | LED transformer 12V/DC, 0-30W, slim, SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

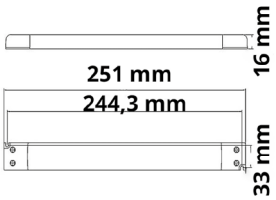
Length: 251mm
Width: 30mm
Height: 17,2mm



112018 | LED transformer 12V/DC, 0-30W, ultraslim, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 40°**

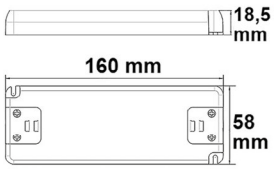
Length: 251mm
Width: 33mm
Height: 16mm



112020 | LED transformer 12V/DC, 0-50W, ultra flat, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 40°**

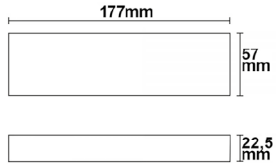
Length: 160mm
Width: 58mm
Height: 18,5mm



113928 | LED Flexband transformer 12V/DC, 0-50W, dimmable (voltage sink), SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 45°**

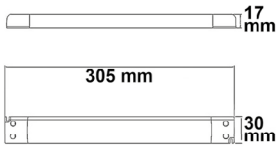
Length: 177mm
Width: 57mm
Height: 22,5mm



113341 | LED transformer 12V/DC, 0-60W, slim, SELV

nominal power **220-240V AC** protection class **IP20**
ambient temp. **-20° - 50°**

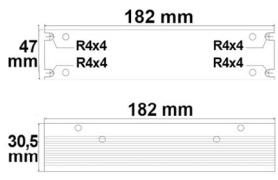
Length: 305mm
Width: 30mm
Height: 17mm



113139 | LED transformer 12V/DC, 0-60W, Mesh Slim

nominal power **220-240V AC** protection class **IP20**
ambient temp. **0° - 50°**

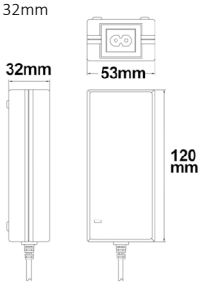
Length: 182mm
Width: 47mm
Height: 30,5mm



111065 | Transformer 12V/DC, 0-60W, with round plug and flat plug

nominal power **100-240V AC** protection class **IP20**
ambient temp. **-20° - 40°**

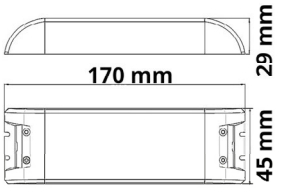
Length: 120mm
Width: 53mm
Height: 32mm



112022 | LED transformer 12V/DC, 0-70W, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 40°**

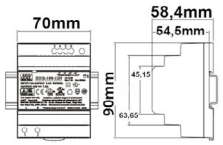
Length: 170mm
Width: 45mm
Height: 29mm



114351 | LED Top Hat Rail-transformer MW HDR-100-12, 12~13.8V DC, 0-100W

nominal power **85-264V AC** protection class **IP20**
ambient temp. **-30° - 45°**

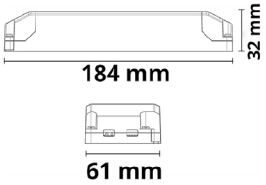
Length: 70mm
Width: 54,5mm
Height: 90mm



113053 | LED transformer 12V/DC, 0-100W, SELV

nominal power **180-264V AC** protection class **IP20**
ambient temp. **-20° - 50°**

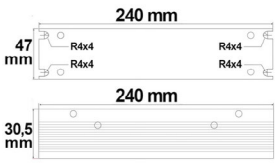
Length: 184mm
Width: 61mm
Height: 32mm



113142 | LED transformer 12V/DC, 0-200W, Mesh Slim

nominal power	**220-240V AC**	protection class	**IP20**
		ambient temp.	**0° - 50°**

Length: 240mm
Width: 47mm
Height: 30,5mm



LED TRANSFORMERS

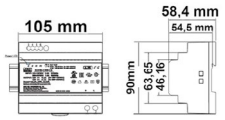
Transformer 48V IP20 - IP67

114353 | LED Top Hat Rail-transformer MW HDR-150-48, 43.2~55.2V DC, 0-150W, IP20

nominal power **85-264V AC** protection class **IP20**
ambient temp. **-30° - 45°**

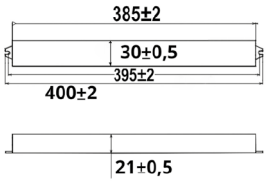
Length: 105mm
Width: 105mm
Height: 90mm



114945 | LED PWM transformer 48V/DC, 0-240W, slim, Push/Dali-2 dimmable, IP67, SELV

nominal power **176-264V AC** protection class **IP67**
ambient temp. **-25 - 50°C**

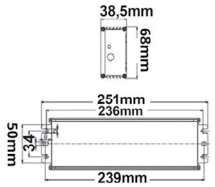
Length: 395mm
Width: 30mm
Height: 21mm



114222 | LED transformer 48V/DC, 0-250W, 1-10V dimmable, IP67

nominal power **180-528V AC** protection class **IP67**
ambient temp. **-20° - 40°**
service life **100000 h** T70|B10

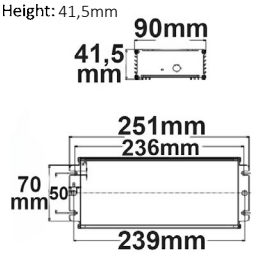
Length: 251mm
Width: 68mm
Height: 38,5mm



114223 | LED transformer 48V/DC, 0-400W, 1-10V dimmable, IP67

nominal power **180-528V AC** protection class **IP67**
ambient temp. **-20° - 40°**
service life **100000 h** T70|B10

Length: 251mm
Width: 90mm
Height: 41,5mm



We are your LED full service provider for customised solutions

"I would like to briefly highlight that although not a major customer, I always feel very well taken care of and treated as a full partner - thank you for that!"

Surge protection

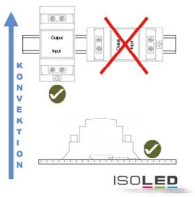
Working example with B16 protective machines

For the ESB from ISOLED® Item no. 113373, we recommend a B13A as the smallest protective device. In the illustration shown here you can see the operation of the inrush current limiter in conjunction with a B16 machine.
A B16 automatic circuit breaker trips at 3 to 5 times of the 16 A rated current. I.e. at the earliest at 48 A. The rms value responsible for the magnetic tripping current of a circuit breaker is 0.707 lower than the peak current.

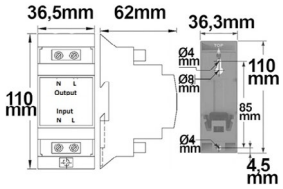
The interconnected inrush current limiter limits the starting current to 48 A (33.9 $A_{effective}$) for 300 ms (T_{on}) and thus prevents the B16 circuit breaker from tripping.

113373 | Startup current limiter 16A for capacitive loads, Top Hat Rail mounting

nominal power	**184-285V AC**	protection class	**IP20**
		ambienttemp.	**-40° - 70°**

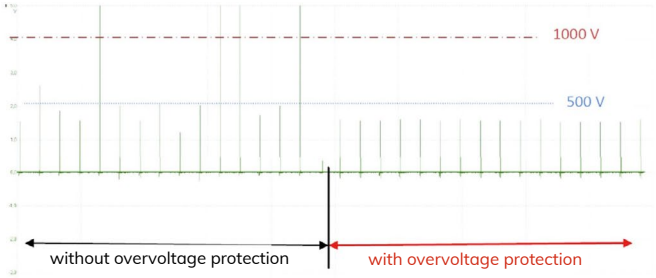


Length: 110mm
Width: 36,5mm
Height: 62mm

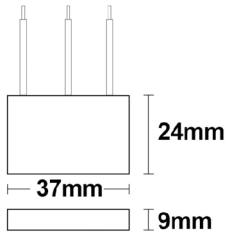


111349 | Surge protection, fine protection for LED technology, T3

nominal power	**220-255V AC**	protection class	**IP20**
active power	**680 W**	ambienttemp.	**-15° - 60°**



Length: 37mm
Width: 24mm
Height: 9mm



114039| LED interference suppression, discharge and compensation module, extinguishing element

nominal power	**250VA CI**	protection class	**P20**
		ambienttemp.	**-40° - 85°**
		service life	**25000h** L70|B10

Attention: Only use the capacitor on AC voltage in parallel connection and never in series connection!

Place the module as close as possible to the consumer. A quiet whirring noise occurs during operation.

Length: 44mm
Width: 16mm
Height: 30mm

We would like to express our grati tude for this.

LEGEND

dimmable

walk-on

drive-on

swiveling

impact-resistant up to 6 Joules

Quick assembly

Linear LED pendant light

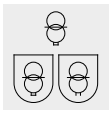
Surface-mount Profile

Recessed profile

maximum flex stripe width

Optional extension of warranty period All additional products and services according to our general terms and conditions and warranty conditions. Additional warranty period extensions available on request.

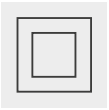
Can be attached to “normally flammable” equipment items. Among others this includes wooden surfaces.



Isolating transformer short-circuit-proof | Short-circuit-proof/protective insulated | Not short-circuit-proof

Do not reach temperatures that can lead to the ignition of materials of unknown fire behaviour. Limited surface temperature 90° in normal operation!

Device of protection class I with protective earthing



Transformer with double or strengthened insulation. No protective conductor must be connected!

This products meets the currently applicable standards and regulations. We can provide you with the CE declaration of conformity on request.

Transformer for use outside lights.

The CE conformity was tested by an external institute.

Temperature-protected transformer. Maximum temperature in the event of a fault 110 °C

Various parameters such as e.g. EMC, fire performance etc. were tested by a TÜV institute. The certificates are provided on request to the market regulatory authorities.

Security transformer

Lights with limited surface temperature for fire-hazard environments. Therefore approved for woodworking shops, barns ...

Here please note: Shipping costs on request! Items with this marking require special freight costs due to their dimensions.

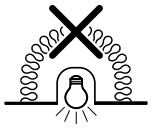
The assembly/installation as well as operation of this item in proximity to foodstuffs of any type is without concern. The quality of the food is neither affected nor impaired.

For colored products, we sometimes specify the color codes of the internationally used and standardised color system (color table) RAL. In such a case, the actual color of the product obtained is considered to be an approximation of the specified RAL color code. Slight color deviations within small tolerance ranges cannot be excluded.

Important notice: Please note that any transformers and luminaires must never be directly covered (e.g. with thermal insulation material).

For direct mounting on normally flammable surfaces NOT suitable luminaire.

For installation in wood or suspended ceilings of normally flammable materials NOT suitable luminaire.



Luminaire or control gear must NOT be covered with heat insulation materials. Applies to all items.
